

Paper Paperboard & Wood Pulp

A2500-2

11/21

MONTHLY STATISTICAL SUMMARY · Vol. 59 · No. 10

October, 1981

Production Steady

The rate of paper and paperboard production in the August - September period continued along the steady path it has followed most of the year. Adjusted for seasonal and workday factors, the August - September rate was 65.9 million tons per year, about 2% above the 64.6 million ton per year level reached in June - July period and close to the high reached in the first two-month period of the year. The rate for the third quarter as a whole was 1.0% above that of the second quarter and almost equal to the first quarter average.

The steady pattern of paper production in August and September contrasts with the weakness shown in some of its major markets. For example, total economic activity as measured by the real gross national product declined at the rate of 0.6% per year in the third quarter, according to preliminary data. The production of nondurable consumers goods in the third quarter averaged 0.2% above that of the second quarter but September data already indicated some decline. Total printing and publishing activity in the third quarter, as reported in the Federal Reserve Board's production index, was 2% above its second quarter level, with the growth concentrated in newspaper and job printing publishing.

Among the paper grades, the strength was concentrated in the printing and writing sectors, with all the major grades showing some modest increases. The rate of incoming orders as well as the backlog of new orders for printing papers show a weakening trend in demand.

The seasonally adjusted rate of paperboard production continued upward in the August - September period from its low point reached at the end of the second quarter. Although the major strength was shown in the container board grades, the rate of production of solid bleached board and recycled board also increased. The strength in contain-

Continued on Page 2

erboard demand is consistent with the trend of shipments of corrugated shipping containers. The Fibre Box Association reported that the rate of shipments in the third quarter of 1981 was above the 250 billion square feet per year rate, well above the low point reached three months earlier but slightly below the highs reached at the beginning of the year. The production of unbleached kraft paperboard for export declined sharply in September from the August rate, reaching a low for the year. The nine-month total of kraft paperboard production for export was 22% below its year ago level; production of semi-chemical paperboard for export was down about 42%; while solid bleached paperboard for export was slightly above its year ago total.

The year-to-date comparison of paper and paperboard production relative to that of 1980 must be considered in terms of the different production trends evident in these two years. Production dropped sharply from the first to the second quarters of 1980, then turned around in the third quarter and was in a fairly strong up-trend during the last three months of the year. In 1981, first quarter production was also relatively strong, but the decline in the second quarter was much less than that shown in 1980. However, economic activity, as noted earlier, eased downward in the third quarter of 1981 and current indications point to some weakness in the last three months of the year.

The average annual rate of production of paper and paperboard in the first nine months of 1981 was 65.6 million tons per year, 3.6% above the comparable rate in the first three quarters of 1980 and 3.0% above the average reached for all of 1980. Weekly data on paper and paperboard production in the early weeks of October show that paper production continued at a fairly strong rate, but paperboard production moved below its September levels.

Technical note: The paper and paperboard production totals for 1979 and 1980 and the monthly data for 1981 shown on the table on page 3 have been revised from the totals previously shown. As noted on this table, the data on production of "other paper", which includes packaging and industrial papers other than unbleached kraft paper plus special industrial papers, are based on information reported by the Bureau of the Census. The Bureau of the Census recently published its 1980 annual issue of Current Industrial Reports, Pulp, Paper and Board. In that report it revised production of these grades of paper downward by 254,000 tons in 1979 and 433,000 tons in 1980, probably reflecting a re-classification to other categories of tonnage previously reported in these categories. This change also affected the data for these grades in 1981. Census also revised its data on wet machine board and construction paper and board but the 1979 change was small and the 1980 revision was upward. Census will probably further revise these monthly data for 1981 in its next issue of Pulp, Paper and Board.

P-Preliminary

R-Revised

SOURCES: Production - Bureau of Census, U.S. Department of Commerce

Producer Price Indexes - Bureau of Labor Statistics, U.S. Department of Labor

While the industry totals shown are lower than previously reported, the trends remain about as indicated. More detailed information on these revisions will be presented in the forthcoming 1981 issue of the Statistics of Wood Pulp, Paper and Paperboard. Tables showing revised monthly data for paper and paperboard production for 1979, 1980 and the first nine months of 1981 are available on request from the Economics Department.

International Trade

Exports of paper, paperboard and products dropped about 14% from July to August to 356,000 tons, a low for the year. Declines were evident throughout the grade structure, with the largest declines in the paperboard grades. (API's data show that kraft linerboard production for export rose sharply in August from the July level, then declined in September. However, the Census data report exports as they leave the country, so the patterns in the two series are not usually identical.)

The export patterns in the July - August 1981 period are in sharp contrast with those of a year ago. July - August 1981 exports averaged 385,000 tons per month, down about 7% from the first half average of 415,000 per month. In 1980, exports rose sharply in the summer and fall of the year, largely under the impetus of the expansion of linerboard exports to the People's Republic of China.

Exports of wood pulp in the summer of 1980 were also stimulated by the demand for wood pulp by the People's Republic of China. However, the level of wood pulp exports has been fairly steady during 1981. The January - August 1981 rate of 3.71 million tons per year was 4% below its year ago level but only 2.4% below the average 1980 rate.

Imports of paper, paperboard and products declined about 8.2% from July to August 1981, also reaching a low point for the year. The August total of 619,000 tons compares to the 711,000 tons per month average for the first half of the year. Newsprint imports continue to make up the bulk of the total, and here too the trend has been down.

Imports were relatively strong in the second quarter of 1981, probably reflecting anticipation of the strikes in British Columbia, which occurred in July and August. The August decline in newsprint imports, to 502,000 from 568,000 tons in June and July and 622,000 tons in May, may reflect the impact of those strikes.

As the table on page 9 shows, imports of the printing and writing grades were sharply below year ago levels in the first 9 months of 1981, although the trend during the course of 1981 has been relatively flat. Imports of the packaging paper grades, by way of contrast, were about 18% above the year ago level, but the rate was only 102,000 tons per year. Paperboard imports also rose strongly, but again the rate of 141,000 tons per year was very small compared to the domestic production rate of about 32 million tons per year.

Sales and Earnings

The following table shows data on net sales and net income after taxes for a total of 26 paper and allied products companies as compiled from published data for the first 3 quarters of 1981 and 1980, together with year-to-date totals.

Sales reported by these companies for the first nine months were 9.5% over the comparable year-ago total, while after-tax income declined by 1.6%. As a result, the margin on sales declined from 5.6% in the first three quarters of 1980 to 5.0% in the comparable 1981 period.

Dollar sales of these companies moved upward from the first to second quarter of 1981, then eased downward in the third, partly for seasonal reasons. Profits also showed a similar pattern, rising from the first to second quarter and falling in the third. Again, the third quarter decline was partly seasonal in nature.

The impact of the 1980 recession can be seen in the pattern of sales and income shown in the year-earlier period. Second quarter 1980 sales of these 26 companies were only slightly above the first quarter level, while earnings held flat. In the third quarter of 1980 however, sales rose in line with the turn-around in total economic activity and profits showed a less than seasonal decline.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 59 - No. 11

November, 1981

Production Rate Bases

Preliminary estimates indicate that production of paper and paperboard in October, at 5,444,000 tons, was only 1.3% above the September total and 3% below that of August. In past years, October production tended to be well above the September total and about equal to that of August.

For the entire January-October 1981 period, total paper and paperboard production was at a seasonally adjusted rate of 65.2 million tons per year, 2.9% above the comparable 1980 rate.

Data on paper and paperboard production in the early weeks of November point to further declines, particularly in paperboard. Paperboard production normally turns down earlier than paper in periods of business downturns; as a major packaging material, it is more rapidly impacted by a decline in industrial production.

The weekly data on paper production published in the API's Weekly Production Report indicate that production in October was about 4% above the rate of shipments, and that there was some inventory building at paper mills. The monthly data also show that production in mid-November started down and was below the October rate.

The major strength in October paper production was in newsprint. Newsprint production in October, at 463,000 tons, was 5% above the September level; the January-October 1981 total was 12.4% above that of 1980 and 30.6% above the comparable 1979 total. These increases reflect the start-up in the 1979-1981 period of six new machines with an announced capacity of 1,075,000 annual tons.

They also reflected the steady trend in newsprint demand. Newsprint new supply (production plus imports minus exports) in the first ten months is estimated at an annual rate of 11.9 million tons, which is slightly above the average 1980 rate. While there was some build-up of newsprint inventories by newspaper publishers, the reported rate of their newsprint consumption in the first nine months of 1981 was also slightly above the 1980 rate.

Production of paper, excluding newsprint in October, was a few thousand tons below the September total. Production of printing and writing papers, for example, was off by 6,000 tons. A gain in the production of uncoated groundwood papers was offset by declines in both coated papers and uncoated free sheet papers.

Production of containerboard for domestic use accounts for about 61% of total paperboard production. This paperboard is shipped to fibre box (corrugated shipping container) plants, where nearly all of it is converted to fibre boxes. Data published by the Fibre Box Association show that the rate of shipment of fibre boxes has been trending downward since July, with the October seasonally adjusted rate about 7.5% below the July peak.

The pattern of fibre box shipments in the first ten months of 1980 was markedly different from that of 1980: In the 1981 period the rate of shipments showed very small fluctuations around a flat trend; last year the trend declined by 9% from March to June, but recovered nearly all that ground during the second half of the year. Thus, where shipments were in a sharply rising trend in the 1980 fourth quarter, they are in a downtrend in the 1981 fourth quarter. Nonetheless, the January-October 1981 total was still some 2.7% ahead of its corresponding 1980 total, and about 1% below its 1979 high.

The production of containerboard for domestic use in the first 10 months of 1981 was 7.7% ahead of its corresponding 1980 total. Part of this increase reflected increases in containerboard inventories at mills and box plants. Data from the Fibre Box Association showed a gain in inventories at mills and box plants of 477,000 tons from January 1 to November 1. (Over 90% of containerboard inventories are held at box plants.) This brought the inventory level to about 7 weeks of supply, compared to 6.2 weeks of supply at the beginning of the year.

SOURCES: Production - Bureau of Census; U.S. Department of Commerce
Producer Price Indexes - Bureau of Labor Statistics; U.S. Department of Labor

Boxboard production has been holding up fairly well. The January-October 1981 total of boxboard production for domestic use was 3.5% above its year-earlier level, with total folding boxboard for domestic use up 4.2%, the solid bleached boards sector up 6.7%, and clay coated recycled board up 3.9%. Among the other major grades, milk carton stock showed a 5.4% decline while cup stock gained 10.7%.

Paperboard production for export held at its September level in October, but for the entire January-October 1981 period was 23.5% below its year-ago rate. At 2.6 million tons per year, however, the export rate compared favorably with the 2.26 million tons shipped to foreign markets in 1980.

Market Wood Pulp

Total market wood pulp production in the first nine months of 1981 was 4.8% below its comparable 1980 total. However, at 6.2 million tons per year, the 1981 rate was well above the 5.7 million tons produced in 1979. Most of the 1980-1981 decline was in the dissolving pulp grades. As the table on page 5 shows, exports of dissolving pulp, as reported by the American Paper Institute's Pulp and Raw Materials Group, was 13% below their comparable 1980 total.

Production of chemical paper grades, however, held close to its year-ago level, with exports showing a small gain. Preliminary data for October, however, indicate that while production rose from its September level, shipments from pulp mills declined and mill inventories rose sharply. The table on page 5 also shows that market pulp inventories at the end of September were 27% above their year-ago level, equivalent to 56 days of supply.

New Supply

The new supply (production plus imports less exports) trend of paper and paperboard in the first three quarters of 1981 closely tracked the trends of the real gross national product. Because of an unusually strong September, the third quarter rate of production, adjusted for normal seasonal factors, was the highest for the year. Third quarter imports, however, were 10% below their first half average, reflecting an 11% decline in newsprint imports, while exports fell 9%. The third quarter level of new supply, at 68.9 million tons per year, was, as the table below shows, slightly above its second quarter level and about 0.6% below its first quarter high. Real GNP showed a similar pattern, falling slightly from the first to second quarters and rising just a bit in the third. The third quarter rise, small as it was, has been traced mainly to increases in inventories, leading many economists to suggest a weakening GNP in the fourth quarter. The ratio of paper and paperboard new supply to real GNP in the first three quarters of 1981 remained remarkably flat, holding close to the 1980 average and suggesting that inventory building of the industry's products is about average relative to the economy as a whole.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 59 - No. 12

December, 1981

Production Declines

The downtrend in paper and paperboard production that started in October 1981 continued through November. The seasonally adjusted rate of production in the October-November months was down to 62.9 million tons per year, compared to 65 million tons per year in the September-October period and 65.7 million tons per year in August-September. (A two-month moving average is used to smooth out the random fluctuations in the seasonally adjusted data.)

These declines followed relatively high rates of production so that output in the first eleven months of the year was at a seasonally adjusted rate of 65 million tons per year, 2.4% over its year-ago level. This compares to 63.7 million tons produced in 1980 and 64.6 in 1979, a year of record-high production. The current weakness in production appears to be continuing into December, suggesting that total production for 1981 will probably be fairly close to the 1979 high, and perhaps even exceeding it a bit to establish a new high.

Declines in the paperboard sector appear to be somewhat steeper than those in paper, consistent with the importance of paperboard as a raw material for packaging products. Nevertheless, for the entire January-November 1981 period, production of both paper and paperboard was above year-ago levels; paper up 3.6% on a seasonally adjusted basis, paperboard up 2.6%. On the assumption that the rate of paper production will decline a little further in December, the 1981 total will probably be close to 31 million tons, about 2.5% above the record high 30.2 million tons produced in 1980. On this same basis, paperboard production will probably be close to the record high 31.4 million tons produced in 1979, and about 1.5% above the 1980 total.

The major declines are occurring in the construction grades. Total construction paper and paperboard, plus wet machine board, is pointing to a total of 2.16 million tons, about 15% below the 1980 total and nearly 45% below the 3.27 million tons produced in 1979. These grades are, of course, strongly affected by the declines in residential housing activity.

The detailed trends of production of paper and paperboard by grade are shown in the table on page 3.

Imports, Exports, New Supply

According to the Department of Commerce, imports of wood pulp, paper and paperboard rose sharply in October from the September level. Imports of wood pulp, for example, amounted to 406,000 tons, compared to 279,000 in September, and a 349,000 ton monthly average for the entire January-October period. Newsprint imports rose to a high for the year of 649,000 tons, compared to a ten-month average of about 580,000 tons per month. Imports of printing/writing papers also made a high for the year at 68,000 tons, compared to its 52,000 tons per month average for the ten month period.

Exports, by way of contrast, fell sharply, with wood pulp exports at 275,000 tons, 21% below the September level. Exports of paper, paperboard and products at 330,000 tons were at a low point for the year. Paperboard exports, according to the Bureau of the Census, amounted to 207,000 tons, and this too, was the lowest level achieved in the year.

While no data are available for the Bureau of the Census on November exports, API data show an unexpected rise in production of paperboard for exports in that month. As shown in the table on page 3, paperboard production for exports in November, 1981, rose to 205,000 tons, with the gain concentrated in kraft paperboard. Even with this gain, however, the 11-month production rate for exports was about 24% below the peak rate reached in 1980. It is interesting to note that the 11-month rate of exports was 14% above the total paperboard produced for export in 1979, which was the previous all-time high.

Total new supply (production plus imports less exports) in October, 1981, drifted down to 68.6 million tons per year, compared to a 68.8 million ton per year average for the August-September period. This rate of new supply in October was consistent with the trend in the real gross national product, with the estimated ratio of new supply to real GNP holding close to the average level for the preceeding three quarters. This suggests that the level of inventories of paper and paperboard products held by producers and consumers is moving with the general national trends. Future demand for paper and paperboard will therefore continue to reflect the trend of total economic activity, with only a modest effect from possible inventory changes.

Capital Expenditures

The Department of Commerce has recently released new data on capital expenditures by U.S. non-farm business. The Department reported that total non-farm business is spending \$323 billion in 1981 on new plant and equipment, 9% above the 1980 total and 19% above the total spent in 1980. It also reported that these expenditures will rise to an average annual rate of about \$350 billion in the first half of 1982. Even after adjustment for price increases, this trend indicates that plant and equipment expenditures are expected to exert a positive measure on total economic activity. Gains were stronger in manufacturing than non-manufacturing sectors. Within the manufacturing sector, expenditures by non-durable goods producers (including petroleum producers) were stronger than those by durable goods producers. Non-durable goods companies are spending about \$65 billion in 1981, 15% above the 1980 level and 37% above 1979

Capital expenditures by paper companies in 1981 were estimated at \$6.72 billion, about 1% below the record high \$6.80 billion spent in 1980 and 21% above the previous high of \$5.55 billion spent in 1979. According to the Department of Commerce, capital expenditures by paper companies are expected to ease to \$6.5 billion per year in the first half of 1982, still a high level by historic standards. This projected dip is consistent with the data reported on starts and carryover of plant and equipment projects. Paper companies started projects worth about \$6.7 billion in 1979 and \$7.7 billion in 1980. However, the average rate for the first three quarters of 1981 was down to \$5.7 billion per year, with the third quarter rate of starts at a \$6.7 billion per year rate. The carryover of expenditures yet to be incurred on plant and equipment projects under way dropped from a peak of \$6.4 billion at the end of the fourth quarter of 1980 to \$5.6 billion at the end of the third quarter of 1981.

Data on capital appropriations recently published by the Conference Board confirm that capital expenditures by paper companies included in the 1,000 largest U.S. corporations will hold up fairly well during the next two or three quarters. The Conference Board reported a revised figure on capital appropriations in the second quarter of 1981 of \$2 billion, which is far and away the highest quarterly current dollar figure reported for this series. In 1979, a record year for appropriations, paper companies appropriated a total of \$4 billion, while in 1980 the total was \$3.6 billion. The Conference Board reported that capital appropriations in the third quarter of 1981 amounted to \$982 million, also a fairly high level.

Capital expenditures by these companies are running at about \$4 billion a year. The closing backlog of unspent appropriations as of the end of the third quarter of 1981 was \$4.3 billion, representing about a little more than a year's expenditures at current rates.

Capacity Survey

The American Paper Institute has just released its 1981 Survey of Paper, Paperboard and Wood Pulp Capacity. This survey shows paper and paperboard capacity rising by 2.5% per year from 1979 through 1982, with relatively small year-to-year deviations from this average. The 1981 capacity level was reported at 72,148,000 tons, 2.0% above the 1980 level. Capacity is expected to rise 3.3% in 1982 to 74,558,000 tons and to rise further to 77,162,000 tons in 1984.

The 1982-1984 increase amounts to 5 million tons, for an average growth rate of 2.3% per year. This compares to the 2.4% per year increase in the preceeding 15 years.

The major gains in the 1982-1984 period are projected in newsprint, 3.7% per year; printing and writing papers, 3.5% per year; unbleached kraft paperboard, 2.1% per year; and semichemical paperboard, 4.0% per year.

Wood pulp capacity is expected to show a somewhat smaller increase, rising 3.3 million tons in the 1982-1984 period for an annual rate of 1.9%, from the 1981 level of 57,010,000 tons. This compares to the 2.5% per year average growth in the preceeding 15 years. However, one capacity announcement made subsequent to the publication of this report would bring the growth rate in the 1982-1984 period to 2.0% per year. In addition, several other projects are under consideration which, if brought in earlier, could increase the growth in wood pulp capacity.

In addition to the usual data on wood pulp, paper and paperboard capacity and fibrous raw materials consumption, the report presents an analysis of paper machines in operation by grade and by size of machine.

For information on how to obtain copies of this report, please write to the Capacity Department, American Paper Institute, 260 Madison Avenue, New York, New York 10016. Copies are available to members at no additional charge; copies to non-members are \$100.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 1

JANUARY 1982

Production moves downward in December but 1981 total at near-record high

In the closing weeks of 1981 production of paper, paperboard and wood pulp turned sharply downward. Mills extended their normal vacation shutdown; several mills shut down completely. On a seasonally adjusted basis, total paper and paperboard production in December was about 5.5% below its November level. Yet even with this year-end weakness, total paper and paperboard production amounted to 64.5 million tons, nearly matching the 1979 high of 64.6 million tons and 1.2% above the 1980 total. Preliminary data indicate that total wood pulp production did reach a new high of about 54 million tons, 2% above the 1980 level, while market pulp production remained above the 6 million ton level, second only to the 1980 record high.

Preliminary data for the early weeks of 1982 show that paper production moved back to the levels held before the year-end shutdowns; paperboard data were not available.

Production of paper and paperboard in 1981, excluding construction and wet machine board, did establish a new high. The 1981 total, based on the preliminary data shown on page 3, reached 62.3 million tons, 1.6% above the 1979 high of 61.3 million tons and 1.9% above the 1980 total.

The trend of total paper and paperboard demand in 1981 (defined as production plus imports less exports) was consistent with that of the total economy. The U.S. economy was basically in a downtrend during 1981; the upward blip in the real gross national product (real GNP) in the summer months was largely the result of inventory accumulation; the trend of final sales moved generally downward after the first quarter. The industry's production was also affected by a decline in exports, estimated at 12% for the year. Imports fell about 5%, so that the total new supply of all grades including construction and wet machine board was 68.2 million tons, 1.5% above the 1980 level but 2.6% below the record high reached in 1979. The new supply of grades excluding the construction and

Continued on Page 2

wet machines board grades was somewhat stronger, at an estimated 65.8 million tons, new supply was 2.3% above the comparable 1980 total and 1.0% below the 1979 high.

The new supply totals include production diverted to inventory and there was some inventory building of paper and paperboard, largely at the end-user level. For example, inventories of containerboard at mills and box plants rose 698,000 tons during 1981, compared with a 6,000 ton gain in 1980 and 18,000 tons in 1979. The January 1, 1982 inventory figures reported by the Fibre Box Association amounted to 9 weeks of supply, but this high level also reflected the low consumption figure used in computing the weeks of supply.

The annual trends in new supply are summarized in the two tables shown below. The first shows production, imports, exports and new supply total of all grades of paper and paperboard in 1979, 1980 and 1981, together with the real GNP and the ratio of new supply to real GNP. This table shows that the total new supply moved in line with real GNP in 1980-1981, but at a level below that of 1979. The 1979 ratio was, itself, on the 1976-1978 trend.

The second table shows these same measures excluding the construction and wet machine board grades. On this table the 1981 production total is at a record high, while the new supply/GNP ratio for 1981 is slightly above that of 1980 and still below the level in 1979.

Production by Grade

Paper: Total paper production, based on the preliminary data shown on page 3, established a new high in 1981. At 31.0 million tons, the total was 2.6% above the 1980 high and 3.7% above the 1979 level. Among the major grades, newsprint turned in by far the strongest performance. Total production reached 5.2 million tons, 12% above the 1980 total and 29% above that of 1979. This strength, as noted in earlier reports, reflected the introduction of several new newsprint machines during the past few years. Newsprint capacity increased from 4.2 million tons in 1979 to 4.8 million tons in 1980 and 5.3 million tons in 1981. The U.S. newsprint industry expects to add an additional 608,000 tons of capacity in the 1982-1984 period, to bring the 1984 total to 5.9 million tons.

The increase in domestic production in 1981 amounted to 567,000 tons. Part of this came at the expense of imports, which declined by about 280,000 tons, or 4% of the 1981 import total. Exports of newsprint accounted for another 95,000 tons, and total new supply rose by about 190,000 tons. However, inventories of newsprint at newspaper publishers rose by 427,000 tons during the first 11 months of 1981. Total U. S. newsprint consumption, according to the data from the American Newspaper Publishers Association held very close to the 1980 level in 1981.

Total production of printing and writing papers also reached a new high in 1981. At 15.8 million tons, the 1981 total was 1% above the 1980 high and 2.3% above the 1979 level. Printing/writing paper capacity has also increased significantly during the past few years, rising from 16.1 million tons in 1979 to 17.3 million tons in 1981. Producers expect to add another 1.9 million tons of capacity in the 1982-1984 period, bringing the 1984 total to 19.2 million tons.

Available data indicate that use of printing/writing papers continued to expand in 1981. For example, data on activity at printing and publishing plants other than newspapers in 1981, as reported in the Federal Reserve Board's Index of Production, showed activity about 4.5% above the 1980 level. Sales by paper merchants as shown by the data on wholesale sales (see yellow Industry Data Sheet) rose about 14% in 1981, which was well above the increase in paper prices as reported in the Bureau of Labor Statistics' price indexes. The 1981 printing/writing paper production totals were also supported to a small degree by an estimated 100,000 ton (14%) decline in imports and a 40,000 ton (11%) increase in exports.

The production of packaging and industrial grades, by way of contrast, showed a small decline in 1981, spread over both the unbleached and bleached grades. Exports of these papers fell about 30,000 tons (10%) while imports rose about 10,000 tons (also 10%). In the 1970 decade production of these grades averaged 5,560,000 tons per year, ranging from 5.2 to 5.9 million tons. (This excludes the 1975 recession low.) The preliminary 1981 total of 5.5 million tons is only 1% below the normal 1971-1980 average. These grades are meeting strong competition from various types of plastic packaging and industrial materials. Producers indicate a 1.3% increase in capacity in the 1982-1984 period, compared to a 0.2% per year increase in the preceding 15 years.

Paperboard: Total paperboard production in 1981 was reported at 31,338,000 tons (see page 3), 1.2% above the 1980 total and only 0.3% below the record-high established in 1979. The 1981 production total was affected by a 789,000 ton (24%) decline in production for export so that production of paperboard for domestic use rose 4.3% from 1980 to 1981. The decline in exports reflected reduction in shipments to virtually all the major export markets. Production of containerboard for domestic use in 1981 was 5.9% above its 1980 level. However, as noted earlier, 698,000 tons of this moved into inventories at mills and boxplants. Average output in end-use markets, weighted by their respective use of boxes, rose by about 3%, while total shipments of fibre boxes, as reported by the Fibre Box Association, fell somewhat below that pace, amounting to 245 billion square feet in 1981, 1.6% above the 1980 total.

Production of bleached paperboard rose 1.6% from 1980 to 1981. Production for export rose only 9,000 tons to 554,000 tons apparently ending the previously established strong export trend -- at least temporarily. The strength in the domestic demand for solid bleached kraft folding boxboard grades (up 5.4%) and cup stock (up 5.8%) was offset by weakness in the demand for milk carton stock and plate, dish and tray stock.

Production of recycled paperboard, which had been moving above year-ago levels throughout 1981, ended the year 1,000 tons below the 7,071,000 tons produced in 1980. The packaging grades of recycled paperboard held up fairly well, with coated recycled folding boxboard showing a 2.7% gain, tube, can and drum stock up 4.4% and set-up boxboard off only 2.1%. Production of gypsum wallboard facings was down by 21,000 tons (2%), while production for export dropped 62,000 tons (off 74%).

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 2

FEBRUARY 1982

Production remains low in January

Preliminary data indicate that the production of paper, paperboard and construction and other grades totalled about 5.1 million tons in January 1982, some 8% below the January 1981 total. Adjusted for seasonal and workday factors, the rate of production, measured by the December 1981-January 1982 average, was at 60.7 million tons per year, only slightly below the November-December 1981 rate. (The two-month average is used for the seasonally adjusted trend of production to iron out irregular and random fluctuations.)

This leveling out in the trend is encouraging. Last January, the rate of paper and paperboard production was at a cyclical peak, at about 66 million tons per year. With the exception of the summer months, when production was supported both by export demand and a temporary recovery in total economic activity, the rate of paper and paperboard production trended downward throughout the year, with the steepest declines occurring during the last quarter. (A table showing monthly data on the production of paper and board, by grades, for all of 1981, and seasonally adjusted data for total paper, paperboard, other grades and the total of all grades is available on request from the Economics Department of API.)

The table on Page 3 shows that, for the most part, production of the various grades of paper in January 1982 moved up close to their November 1981 levels. With the exceptions of newsprint, tissue and uncoated free sheet paper, production of the major grades of paper in January 1982 was well below the year-ago highs. Newsprint production has been far less affected by the current business downturn. Consumption of newsprint in the U.S. held up fairly well throughout 1981, while the increases in domestic newsprint capacity enabled U.S. newsprint producers to supply a larger percentage of the consumption total. In addition, newsprint exports in 1981, at 270,000 tons, were nearly 100,000 tons above the 1980 level. Production of tissue papers also held up fairly well throughout 1981. These papers, representing primarily consumer products, tend to move in line with consumers' purchases of non-durable goods, which generally show modest fluctuations over the business cycle.

Continued on Page 2

Paperboard production, on the other hand, as a major packaging product, is more responsive to the business cycle. The January 1982 data indicate that the largest impact fell on containerboard production for domestic use, particularly unbleached kraft linerboard. The trend in production of containerboard for domestic use was consistent with that of fiber box shipments. The Fibre Box Association reported that shipments of fiber boxes in January 1982 were 10% below their January 1981 level; production of containerboard for domestic use showed a 12.6% decline. The FBA also reported that inventories of containerboard at box plants, which had been in a rising trend throughout 1981, peaked at the end of the year and fell about 180,000 tons during January 1982. The inventory at box plants as of February 1, 1982 represented about 7 weeks of supply in terms of the current rate of consumption; it was close to 6 weeks of supply in 1980, an average for the industry.

Data Adjustments

The table on page 3 presents the available data on paper and paperboard production for the last three months of 1981 and January 1982. While the 1982 data in this table include data on the production of wet machine board, building paper, insulating board and hard pressed board, these represent API estimates based on recent trends. The actual data for November 1981 and earlier months was obtained from the Bureau of Census' monthly publication, Current Industrial Reports, Pulp, Paper and Board, which Census has been publishing for about 35 years. The Bureau of Census has informed us that it will no longer collect and publish the monthly data after December 1981. It will continue to publish the annual data on production in considerable detail. The annual data have been published 3 or 4 quarters after the end of the year in the past. Although the totals reported in the first paragraph above include API estimates of construction paper and board and wet machine board production to keep the totals consistent with earlier published data, future reports will show industry totals for paper and paperboard only, based on information supplied to us by member companies.

Total production of paper and paperboard, using this definition, amounted to about 4.9 million tons in January 1982, 7% below the January 1981 level. The trend rate of seasonally adjusted production was 58.9 million tons per year.

(1) - Grade definitions revised by Census as of January 1979. New grades now consistent with API definitions. 1977 and 1978 Census data adjusted by API for comparability with 1979.

* See page 3 for Hard Pressed Board data.

Computed by API P-Preliminary R-Revised

SOURCES: Production - Bureau of Census, U.S. Department of Commerce
Producer Price Indexes - Bureau of Labor Statistics, U.S. Department of Labor

The data on wood pulp production shown on Page 5 include only the chemical and mechanical grades used in the manufacture of paper and paperboard and do not include the defibrated and exploded wood pulps, used mainly in production of building board. Estimates of these grades of wood pulp have been presented in the yellow fact sheet that accompanies this report and were made on the basis of building board production. Without the monthly data on building board production, it will no longer be possible to estimate monthly data on production of defibrated and exploded wood pulp.

The table on Page 5 presents data on the consumption of fibrous raw materials used in the manufacture of paper and paperboard. We will continue to report this information, although some of the groundwood pulp included in this total is used by the building paper and board sector, and the data on other fibrous raw materials will have to be estimated on a trend basis extrapolated from the latest annual totals.

Wood Pulp

The market wood pulp data presented on Page 5 are taken from API reports. Of major interest are the data on chemical paper grade market pulp. The Pulp, Raw Materials and Technology Group of API reported that total chemical grade market pulp production in 1981 amounted to 4.85 million short tons, 1.3% below the 1980 record high. Production in January 1982, however, at 337,000 short tons, was about 15% below its year-ago level and about 16.5% below the 1981 average monthly rate. Inventories of market pulp held by producers have recently been in a sharp uptrend; the level as of the end of January 1982 was 56% above its year-ago rate. Inventories of purchased pulp held by consumers, probably rose only modestly; their December 1981 total was only 7% above that of December 1980.

Sales and Earnings

Reported sales of 30 paper and allied products companies for the fourth quarter of 1981, accounting for over 65% of the industry total, were 5% below their third quarter level, and 0.8% below the year-earlier level, reflecting the decline in output evident in that period. Even with the decline in sales, earnings rose from the third to the fourth quarter by 9%, although the fourth quarter 1981 total

was down 11% from its year-ago level. The earnings total^s reported here represent earnings after taxes on continuing operations only and include earnings from operations other than pulp, paper and paperboard. In our definition operating earnings do not include the effects of gains or losses from such sources as sale of properties.

For 1981 as a whole, sales by these companies were up 7%, profits after taxes as defined here down 3.5%. The margin on sales in 1981 averaged 5.0% compared to 5.5% in 1980. The table below summarizes the data for 1980 and 1981.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 3

MARCH, 1982

Production Turns Upward

The decline in total business activity in the fourth quarter of 1981 was reflected in the demand for paper and paperboard. Production of paper, paperboard and construction paper and board moved from 65.7 million tons per year in the third quarter to 61.9 million tons per year, seasonally adjusted, in the fourth. This may be the low; preliminary figures indicate a modest upturn is underway.

The January 1982 trend level, calculated from the two-month moving average to correct for random fluctuations in the data, was at a seasonally adjusted rate of 60.9 million tons per year. The trend rate in February moved up to 62.4 million tons per year. This marked a 2.5% gain from the December-January low and brought the trend rate back to the November 1981 level.

Paperboard production which is closely aligned with the production of goods for packaging, was more strongly affected by the business downturn than the paper sector. At its low point in December-January, the trend of paperboard production was 28.9 million tons per year, 4.0% below its November trend level. The subsequent recovery in production was correspondingly steeper, with the February 1982 trend position rising above the November 1981 level. Much of this fluctuation can be traced to changes in inventories; for example, January production of containerboard was strongly affected by the sharp reduction of inventories of containerboard held at box plants. The February trend position of paperboard production was 30.2 million tons per year, which favorably compares with the 31.3 million tons per year for all of 1981. However, the January-February 1982 production total was 7.5% below the comparable year-ago level with the major grades showing declines ranging from about 7% for solid bleached paperboard, to 8.5% for recycled paperboard.

Paper production made its low in the December 1981-January 1982 period at 30.2 million tons per year. The January-February rate strengthened slightly, moving to 30.4 million tons per year. Newsprint production held close to its recent high level, but production of bleached bristols made the strongest showing, with the January-February 1982 total some 10% ahead of its year-earlier level. Within this category, the largest increases were recorded in the index and printing uncoated bristols and in coated bristols.

Continued on Page 2

Production of uncoated groundwood papers, by way of contrast, was down 11.4% in this period, largely reflecting reductions in shipments to "other periodical" publishers and commercial printers.

Technical Note: The Bureau of the Census has discontinued publication of its monthly report, Current Industrial Reports, Pulp, Paper and Paperboard, wherein it published monthly data on paper and paperboard production, including the wet machine and building paper and board grades, along with data on waste paper receipts and inventories, consumption of market pulp at paper and paperboard mills and consumption of wood pulp at non-paper mills.

We will continue to estimate the 1982 monthly data on production of wet machine board, building paper and building board until we have completed publishing all the 1981 monthly data on these grades that Census will make available. After that, we shall omit all data on these grades in the table on Page 3 and delete the upper table on Page 10, which reports the Census monthly data.

Data will only be available from the Bureau of Census in the annual issues of Pulp, Paper and Board, generally published about three calendar quarter after the end of the year. The American Paper Institute will continue to publish the annual Census data on these grades in its annual publication, Statistics of Paper, Paperboard and Wood Pulp, although there may be some time lag if the Census data are not available by the usual publication date of the API report.

API had previously relied on Census for data on production of thin papers and packaging and industrial converting papers plus special industrial papers. We will be able to report monthly production data on these grades based on member reports.

Imports and Exports

The Foreign Trade Division of the Bureau of Census will continue to report monthly data on imports and exports. These data are collected from the documents accompanying import and export shipments. Census reported January 1982 imports of paper, paperboard and products at 675,000 tons, only 1.1% below the January 1981 level.

Primary paper imports, which accounted for 96% of the total, were 1.2% ahead of their year-earlier level and slightly above the average monthly level for all of 1981. January 1982 newsprint imports matched their year-ago total. Imports of paperboard were down sharply, but even in 1981, the total was only 131,000 tons for the full year.

The weakness in demand for construction paper and paperboard, which, in turn, stemmed from the very low rate of activity in new housing construction, was reflected in a 50% decline in imports of construction paper and board in January 1982 from the January 1981 level. Imports of these grades amounted to nearly 400,000 tons in 1981.

Imports of fiber in January 1982 showed sharply divergent trends. Imports of pulpwood chips, at 143,000 tons, were 4% ahead of their year-earlier level, while pulpwood roundwood imports, at about 9,000 cords, were down 55%. Wood pulp imports, which amounted to 4.1 million tons in all of 1981, totaled 270,000 tons in January 1982, 29% below their year-ago level, representing a rate of only 3.2 million tons per year. Domestic production of wood pulp in January 1982, in line with the weakness in paper and paperboard production, was 9% below its year-earlier level.

Weakness in worldwide paper and paperboard demand and poor weather in January 1982 contributed to the 19% decline in the total volume of U.S. exports of wood pulp, waste paper, paper, paperboard and products. Wood pulp exports in January 1982 were 24% below their January 1981 level. API data showed export shipments of chemical paper grade market down about 21% in this same period. A strong recovery in these exports in February 1982 brought the January-February 1982 total to within 3% of its year-ago level.

Census data showed exports of paper, paperboard and products down 19% in January 1982 from their year-ago level, with paperboard exports down 22% and paper exports off by 8%. However, exports of newsprint, in line with the availability of new U.S. capacity, at 29,000 tons, were 156% ahead of their January 1982 rate. Exports of the other paper grades were down sharply.

Capital Expenditures

The Department of Commerce, in its March 11, 1982 release, confirmed that paper industry expenditures on new plant and equipment in 1981 totalled \$6.72 billion, a shade below the record \$6.8 billion spent in 1980 but 21% above the \$5.55 billion spent in 1979. The government agency made a remarkably good record in estimating paper industry's 1981 expenditures on plant and equipment. In March 1981 its estimate for the full year 1981 was \$6.73 billion; its current estimate for paper industry expenditures on new plant and equipment for the full year 1982 is \$6.75 billion.

Commerce also reported that such expenditures in the first quarter of 1982 were expected at the rate of \$6.17 billion per year, and that they would rise to \$6.3 billion per year in the second quarter and average a record high \$7.2 billion per year in the last six months of 1982. The attainment of these high levels in the second half of the year is uncertain.

These expenditures were reported on a constant dollar (1972 price level) basis. Analysis of the published data show that the price index of paper industry plant and equipment expenditures rose by 8% from 1980 to 1981, so that the "real" rate of expenditures, that is, the rate adjusted for such price increases, actually fell by 8.5%.

While the Department of Commerce did not project real capital expenditures on an industry-by-industry basis, it did make such projections for total non-farm business expenditures and for several of the major sub-groups. For the nation as a whole, it indicated that capital expenditures would rise by 7.3% in current dollars in 1982, but that prices to purchase these goods would rise by 8.4%, so that real expenditures would decline by about 1%. The reported figures show that the real rate of expenditures would rise during the course of 1982, with the rate in the second half of the year above the average 1981 level.

The Conference Board reported a somewhat more optimistic view of future plant and equipment expenditures by paper and allied products companies. The Board reported that those paper and allied products companies included in the 1,000 largest U.S. companies appropriated \$1,304 million for new plant and equipment in the fourth quarter of 1981 compared with \$892 million in expenditures in that quarter. After adjusting for cancellations, the backlog of unspent appropriations rose to \$4,685 million, a record current dollar level and, when adjusted for price changes, nearly matching the constant dollar peak reached in the first quarter of 1980. Since the end of the first quarter of 1981 these companies increased their unspent backlog of capital appropriations by \$1.3 billion.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 4

APRIL, 1982

Production down from 1981 levels

Production of paper and paperboard (excluding wet machine board and the building grades) in March 1982 totalled 5.4 million tons; about 3% below the 5.6 million tons reached in March 1981. The average rate of production for the first quarter of 1982, adjusted for seasonal and work day factors, was about 61 million tons a year, 3.5% below the cyclical peak attained in the first quarter of 1981, but about 1% above the fourth quarter 1981 seasonally adjusted rate. These trends suggest that the low point in the current paper and board production cycle was made in the fourth quarter of 1981 and that the first quarter 1982 rate represented the start of a small but unsteady recovery. Data on the production of paper and paperboard for the early weeks of April indicate that some of the mills took extended down time for the Easter holiday; the April production rate is probably below that of March.

These trends in production are more or less consistent with the pattern of total economic activity, although the quarter-to-quarter changes were not identical. For example, total economic activity, as measured by the real Gross National Product, declined at the rate of 3.9% a year from the fourth quarter of 1981 to the first quarter of 1982 with the first quarter 1982 level about 2% below that of the first quarter of 1981. Personal consumption expenditures on goods (after adjustment for price changes) were off by nearly 1% from the first quarter of 1981 to the first quarter of 1982, with expenditures for non-durable goods showing a slight increase while expenditures for durable goods were down. Consistent with this pattern, paper production showed only a 0.6% decline from the first quarter of 1981 to the first quarter of 1982, while paperboard production, which is more sensitive to inventory changes in the economy, was off by 6.4%.

Continued on Page 2

A similar consistency is shown in the relationship between paper and board production and the appropriate sectors of industrial production. For example, the production of non-durable consumer goods in the first quarter of 1982 was 1.5% below its year-ago level while the production of durable consumer goods, excluding automotive products, was off about 12%. These trends probably reflected the effects of reductions of inventories throughout the business structure. The preliminary GNP data for the first quarter 1982 show that business inventories (measured in 1972 prices) were reduced at the exceptionally large rate of about \$17 billion per year. That alone accounted for nearly all of the reduction in the real GNP from the fourth quarter of 1981 to the first quarter of 1982. Consumer expenditures for both durable and non-durable goods rose slightly in the first quarter while fixed investment by business declined at a rate of only 2.7% per year. Thus, final sales (GNP less the change in business inventories) in the first quarter of 1981 rose at a rate of 1.9% per year and moved slightly above the level of the last three quarters of 1981.

Paper grades: The relatively small decline in the production of paper this year compared with year-ago levels reflects continued strength in newsprint production offset by only modest declines in the other paper grades. Newsprint production in the first quarter of 1982 was 7% above the year-ago total, with some of the production moving into publishers' inventories in anticipation of potential work stoppages in Canada. The production of printing/writing papers in the first quarter of 1982 was 2.6% below its year-ago total; tissue papers were off 1.8% and packaging papers down about 1%.

Paperboard grades: Paperboard production in the first quarter of 1982 was down about 6.4% from its year-ago level with declines experienced in almost all of the grade structure. The production of containerboard for domestic use fell 8%; boxboard for domestic use was down about 5.5%. The weakness in containerboard production is consistent with the trend in shipments of corrugated shipping containers, which were also about 6% below their year-ago levels in the first quarter of 1982, and with the need to reduce heavy inventories of linerboard at box plants.

Among the boxboard grades, the production of folding boxboard in the first quarter of this year was about 7% below last year, with solid bleached for domestic use down a little over 5%, and recycled down a little under 7%. Production of bleached paperboard for milk carton and food service in the first quarter fell 9% below year-ago levels. The one major movement contrary to this trend was in production of paperboard for export, which showed a 2.4% gain over last year, with unbleached kraft production for export up 5%.

SOURCES: Production - Bureau of Census, U.S. Department of Commerce

Producer Price Indexes - Bureau of Labor Statistics, U.S. Department of Labor

Technical Note: The upper table on page 10 presents the monthly data on paper and paperboard production reported by the Bureau of Census for the last four months of 1981, together with the year totals for 1979-1981. The December 1981 data mark the final report by the Bureau of Census on monthly data on paper and paperboard production. As a result, this table will be deleted in the May report. Similarly, the data shown on page 3 for wet machine board, construction paper and insulating board for December 1981 represent the last monthly figures that will be reported by the Department of Commerce. The data shown for January, February and March represent estimates made by the American Paper Institute to maintain consistency with the previously reported totals. However, in the May report these totals will be deleted and the table will only show data on total paper plus total paperboard production, which are compiled by the American Paper Institute. The figures for 1981 for "other" paper production, which includes the total of production of bleached kraft papers, specialty packaging papers, and special industrial papers will be revised to reflect information now available from the Divisions of the American Paper Institute. We will continue to report the monthly combined total production of these three grades.

Sales and Earnings

The Federal Trade Commission recently made available data on sales and earnings of paper and allied products companies in 1981. The FTC informed us that it has revised the data for the fourth quarter of 1980 and all of 1981 on the basis of new information derived from the Internal Revenue Service. This newly available information led them to re-benchmark their estimates to a somewhat higher level than previously reported.

The FTC reported that for 1981 as a whole, net sales of paper and allied products companies amounted to \$62.5 billion or about 11% over the revised 1980 figure. (API restructured 1980 data on the basis of information supplied by the FTC.)

Net income after taxes in 1981 amounted to \$3.1 billion, indicating a sales margin of 5%. Earnings also showed a gain of 11% over the year-ago level. However, a significant part of the gain in earnings reflected the effect of gains realized on the sale of property and from other non-operating income. Earnings estimates adjusted for such non-operating income indicated a decline in operating earnings of about 5% from 1980 to 1981. (This estimate is based on an analysis of data reported by companies accounting for about 70% of the industry's 1981 sales volume.)

Many of the large companies in the paper and allied products industry however, are also major producers of wood products. With the demand for wood products in 1981 at very low levels because of low housing construction, profits of the wood products industry fell to low levels. If the low profit performance of wood products were removed, profits from paper operations in 1981 would probably be shown to be well above the 1980 level.

Preliminary data are available on the sales and profit trends in the first quarter of 1982. On the basis of information reported by 32 companies, accounting for about 70% of the industry's total sales, net sales of paper and allied products companies declined by 6.8% from the first quarter of 1981 to the first quarter of 1982.

Net income after taxes from these companies fell by 50%, indicating a decline in the average sales margin from 5.1% to 2.8%. A review of the individual company data indicated that the largest declines in earnings continued to reflect the profits of those companies involved in the wood products industries.

Technical Note: The lower panel of page 10 shows data on the prices of paper and allied products as reported by the Bureau of Labor Statistics. Effective with 1981, the BLS had expanded its coverage of the paper and allied products price index to include data on prices of printed matter. These printing industry prices moved up considerably faster than the prices of pulp, paper and allied products alone during 1981. BLS also reports a separate price index of pulp, paper and products (excluding building paper and board). The table on page 10 now shows this price index, which is a better representation of the trends of paper and allied products alone. The calculated index excluding waste paper was also revised and will now be based on the pulp, paper and products sub-index.

Paper Paperboard & Wood Pulp

A2500-2

6/9/82

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 5

MAY, 1982

Production Moves Downward

Production of paper plus paperboard in April moved down to a seasonally adjusted trend position of 59.6 million tons per year. (The trend position is measured by the two-month average of the seasonally adjusted data.) This decline reversed the rising trend of production evident in February and March and brought the production rate to a level 1.5% above the August 1980 trend position - the low point of the last recession.

Paper production has shown a relatively stronger performance than paperboard. For the first four months of this year, for example, paper production was 2.1% below its year-ago level while paperboard production was down 7.4%. Paperboard production is sensitive to manufacturing activity, which was 7.8% below year-ago levels, according to the manufacturing component of the Index of Industrial Production.

Among the major paper grades, newsprint production continued to buck the trend. For the first four months of 1982 newsprint production was 5.5% over its year-ago level. Part of the production was diverted into inventories of newspaper publishers because consumption of newsprint by U.S. publishers was only up about 1%. Newsprint imports, in the first quarter of 1982 declined 4% from their year-ago level.

Production of tissue paper also continued to run above its year-ago level, with the four month 1982 total about 0.6% above the corresponding 1981 level. Tissue is a consumer grade and thus more sensitive to consumer income and the general level of total economic activity.

Production of printing and writing papers in the first four months of 1982 averaged about 3% below the corresponding year-ago level. Groundwood papers showed the largest declines; uncoated free sheet papers about average; and bleached bristols coated papers were within 2% of their year-ago rate. New orders for groundwood paper were relatively strong in April, bringing un-

Continued on Page 2

filled orders 6.5% above their year-ago level. New orders for coated papers also held up well and the backlog of coated paper unfilled orders was also above its year-ago level at the end of April 1982. However, new orders for uncoated free sheet papers continued to run below their shipments level and the backlog of unfilled orders at the end of April was 43% below the April 1981 position.

The data reported on page 3 for the production of packaging and other papers have been revised on the basis of information received by the Kraft and Packaging Papers Division of the API. As a result, the 1981 total was revised to 1,678,000 tons, about 4% above the previously reported level. The API data show that shipments of unbleached kraft paper in the first four months of 1982 were down about 8% from their year-ago total, while other paper, which includes specialty packaging and special industrial papers, were down about 7%. With the exception of grocers' sack paper, which accounts for about 40% of the total, the packaging and industrial papers are also affected by trends in the output of manufactured goods.

All the major grades of paperboard were strongly affected by the declines in industrial production, with declines in production ranging from 6.5% in recycled paper to nearly 10% in semichemical paperboard. Unbleached kraft linerboard production, including production for export, was down by 7%, while the exports alone showed a 5% decline. Production for export of semichemical paperboard, while only about 166,000 tons per year, was down 2.4% from its year-ago level. On balance, total paperboard production for export in the first four months of 1982 was down about 6.0%.

On a market basis, the production of containerboard for domestic use showed a 7.7% decline, compared to the 6.6% decline reported for shipments of fiber boxes, as reported by the Fibre Box Association. The Fibre Box Association also reported that inventories of containerboard at box plants rose slightly in April, but still remained about 140,000 tons below the level reached at the beginning of this year. Containerboard inventories at paperboard mills inched upward a fraction of 1% in April, but its level was about 60,000 tons above that of the beginning of 1982.

Production of boxboard for domestic use in the first four months of 1982 was down about 7.5% from its year-ago level. Declines were distributed throughout the grade structure, with folding boxboard down 7.7%, and milk carton and food service 8.2%.

Imports, Exports, New Supply

In this and future reports, the production data will no longer include information on production of wet machine board, construction paper or insula-

* Production data seasonally adjusted

** Actual total

ting board. However, the table on page 9 showing imports and exports of these grades will continue to be reported, but a separate total will be shown for the paper and paperboard grades alone.

Data on imports for the first quarter of 1982, as reported by the Bureau of Census show total imports of paper plus paperboard down 3.3%, an increase in imports of converted paper and paperboard products held the total to a 3.1% decline.

Exports declined rather sharply, with the total of paper, paperboard and products down about 14%, and 12% for the primary grades alone. Census data also show that wood pulp exports were down 9%. Paper grade chemical market wood pulp exports reported by the API's Pulp and Raw Materials Division showed a 3.5% decline for the same period.

The first quarter 1982 rate of paper and paperboard new supply was 64.8 million tons per year. This was equivalent to 43,700 tons for each billion dollars of the real gross national product, about the same as it was in the first half of 1981 and 0.4% above the average 1981 level.

To put the data on production imports, exports and new supply in perspective, the table on the lower half of page 10 shows the annual figures for 1972 through 1980, together with quarterly data for 1981 and the first quarter of 1982. The table also shows data on the real gross national product and the ratio of new supply to the real gross national product for these various time periods.

Technical Note:

The table on page 3 has been revised to exclude all data reported by the Bureau of Census. This includes data on production of wet machine board, construction paper, insulating board, and hard pressed board. Census no longer publishes monthly data on these series. In addition, data on "other paper" and thin paper will now be reported based on information from API Divisions.

The data on page 5 now exclude production of defibrated and exploded wood pulps and production of screenings, together with data on consumption of these fibers in the manufacture of paper and paperboard. Defibrated and exploded pulps are used largely in the construction grades so that the wood pulp consumption now reported represents consumption at paper plus paperboard mills. In addition, data on consumption of other fibrous materials - rags, straw, bagasse, etc. - have also been deleted. A large part of these fibers are used in the manufacture of building paper. Cotton linters and hemp are among the fibers used in the manufacture of paper and paperboard, but these amount to only a few hundred thousand tons a year, and no estimate can be made on a monthly basis. The footnote showing consumption of waste paper at paper and board mills, as reported by the Census, is also, of course, deleted. Data on consumption of waste paper at paper and board mills, as reported by API's Paper Recycling Committee, have been adjusted to exclude waste paper used at wet machine board and construction paper and board mills. Thus, the consumption of total fibrous materials shown on the bottom panel of this page represents a reasonable estimate of consumption at paper plus paperboard mills.

The table on pages 7 and 9 on imports and exports have been modified to include totals of imports and exports of paper plus paperboard only. However, these tables will continue to show imports and exports of wet machine board and construction paper and board, and also the industry totals including these grades. These data come from the Foreign Trade Division of the Bureau of Census, which continues to publish monthly data. The new totals of imports and exports of paper and paperboard alone can be used to estimate the total new supply of these grades.

The table on page 10 showing production of paper and paperboard by grades, as reported by the Bureau of Census, has also been deleted. The API's annual report, Statistics of Paper, Paperboard and Wood Pulp, will continue to report data on wet machine board, construction paper and construction board, inasmuch as the Bureau of Census plans to continue to publish these data on an annual basis.

The charts on pages 4, 6 and 8 have also been revised to exclude data on production of wet machine board, construction paper and insulating board. A new chart has been added on page 8 showing paperboard production for export.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 6

JUNE 1982

Production Weakens

Preliminary data for May 1982 indicate that the rate of paper and paperboard production moved below the low rate of the previous month. The May trend level -- the April-May seasonally adjusted average -- was 58.5 million tons per year. This was 4.0% below the first quarter 1982 average of 60.9 million tons per year and represented a lower production rate than the 1978 average. Production in the first quarter of 1982 had marked a small recovery from the 60.0 million tons per year rate of the fourth quarter of 1981, but was still well below the 63.0 million tons per year achieved in the first three quarters of that year.

The production trend was consistent with the weak demand for goods generally. For example, the Federal Reserve Board index of total manufacturing production in May 1982 was 139.1 (1967=100), which was about 9% below its year-ago level, and it too was below its average 1978 level. In fact, the trend of paper and board production during the past 18 months has been remarkably consistent with that of manufacturing production. For example, manufacturing production fluctuated in a very narrow range from January through September 1981 and then dropped sharply in October and showed further declines in November and December. The index of production of manufactured goods showed a slight recovery in January and February 1982, but has since been trending downward. This pattern is duplicated in the record of paper and paperboard production since January 1981.

Some of the weakness in manufacturing activity stems from cutbacks in inventories evident during the past 6 months. For example, non-farm inventories in the second and third quarters of 1981 were being built up at a rate of \$11 billion per year, expressed in 1972 prices, according to the data in the national product accounts. In the fourth quarter the annual rate of accumulation dropped sharply to \$1.3 billion and in the first quarter of 1982 inventories were drawn down at the rate of \$16.5 billion per year. Preliminary data released by the Department of Commerce suggest that inventories were further reduced in the second quarter, although at a much slower rate than in the first. The packaging paper and paperboard segments of the industry are particularly sensitive to such inventory changes.

Continued on Page 2

Although downtrends were evident throughout both the paper and paperboard grade structure, paperboard showed the sharper declines. For the first five months in 1982 paperboard production was at a seasonally adjusted rate of 29.7 million tons per year, 7.6% below its corresponding year-ago level. Paper production, at 30.3 million tons per year, was down 2.7%.

Among the paper grades, newsprint continued to show the strongest pattern of production. But even in this category, output was in a declining trend in April and May despite an increase of 3.5% over its year-ago level for the first five months as a whole. Tissue paper production held close to its year-ago rate while the production of packaging and industrial grades was down 9%.

The printing and writing grades were down 3% for the five month period. New orders for groundwood paper in 1982 have been a little stronger than shipments with a consequent rise in unfilled orders. Orders for both coated and uncoated free sheet grades have been below shipments; the unfilled order backlogs continued downward.

All the major sectors of paperboard showed declines, with relatively small grade-to-grade deviations around the average rate. Production of containerboard for domestic use, for example, was down 8.2% in the first five months of the year; this was fairly consistent with the 6.5% decline in shipments of fibre boxes reported by the Fibre Box Association. Inventories of containerboard at mills and plants increased moderately during the past three months and in terms of the relatively low rate of shipments are now in excess of 8 weeks of supply.

Production of boxboard for domestic use was down 8.2%, with no strength evident in any of the major grades.

Paperboard production for export in the first five months of 1982 was down 5.4% from its year-ago level, paced by kraft linerboard. However, the average rate of kraft linerboard production for export in the first five months of the year - 1.94 million tons per year - was above the 1981 average rate, while exports of solid bleached board, at 544,000 tons per year, was only modestly below the 557,000 tons exported in 1981 and almost matched the 545,000 tons exported in 1980.

Weekly data for the first two weeks in June indicated that paperboard production moved below its May rate, while production of paper appeared to have remained flat.

Technical Note: The data on printing and writing papers for the first four months of 1982 and all of 1981 have been revised in line with the Printing Paper Division's annual data review. The 1981 production total is now reported at 15,681,000, about 3/4% below the previously reported total. The major change was in the bleached bristols category; the earlier published data had been based

on data available from the Bureau of Census, while the current figures reflect information on production of this grade as reported to the Division by API members. A table showing the revised monthly 1981 data is available on request from the API Economics Department.

Foreign Trade

Both imports and exports of pulp, paper, paperboard and products are feeling the effects of recession. Imports of paper and paperboard, as shown in the table on page 9, were at a rate of 7.5 million tons per year in the first four months of 1982, 6% below the year-earlier rate, while exports, at 3.6 million tons per year, were down 15%. Imports of wood pulp this period were down about 15%, but exports, according to Census, were down only 5%. This export rate is consistent with the API data on exports of paper grade chemical market pulp, down 4% from their year-ago level in the first four months of 1982.

The recession evident in the foreign markets for U.S. paper has reversed the recent uptrend in paper exports. For example, exports of paper in the first four months of 1982 were down 12.5% from the year-ago total, reflecting a 39% decline in the printing and writing paper exports and a 33% decline in exports of unbleached kraft paper. However, newsprint exports continued to increase, with the rate in the first four months of 1982 at 315,000 tons per year, 52% above its year-ago level. In addition, exports of packaging papers (other than unbleached kraft) and special industrial papers, at 228,000 tons per year, were 11% over their year-ago total.

In dollar terms, the value of exports in the first four months of 1982, at \$4.47 billion per year, was 11% below its corresponding year-ago rate.

New Supply

The table on the bottom of page 10 traces the trends in new supply of paper and paperboard, and compares them with the changes in real gross national product. The 1981-1982 production data are revised from those shown in the May 1982 issue of the Monthly Statistical Summary, largely reflecting the changes in production of printing/writing papers noted above in the discussion of paper production.

The new supply pattern more or less followed the trend of business. New supply remained fairly flat throughout the first three quarters of 1981, at a rate of about 66 million tons per year. Relative to GNP, it also moved along a flat trend, averaging about 43,600 tons per billion dollars of real GNP. New supply dropped in the fourth quarter, but not as fast as production; imports rose significantly while exports fell 10%. The fourth quarter new supply averaged 64.4 million tons per year; relative to GNP it dropped just below the 43,000 tons per billion dollar level. For 1981 as a whole, revised data show new supply at 65.65 million tons, equivalent to 43,500 tons per billion dollars of real GNP. This

compared favorably to the 1980 rates, but was down from the 44,600 tons per billion dollars average of the 1977-79 period.

Along with production, new supply strengthened in the first quarter of 1982 as imports declined while exports showed a moderate increase. Although the rate was only 64.7 million tons per year, the decline in real GNP brought the ratio of new supply to GNP to 43,600 tons.

The April/May calculations shown in the table on page 10 include the arithmetic assumption that the rate of imports and exports in April held flat in May. On this assumption, new supply dropped to 61.3 million tons per year, while GNP showed a small gain; the ratio is estimated at only 41,200 tons per billion dollars for the period, which was below the average of the 1975 recession year, but above the second quarter 1975 low of 39,800 tons per billion dollars. As in 1975, this pattern strongly suggests that inventories of paper and board products held by consumers are being reduced, setting the stage for a potentially strong upsurge in the later months of 1982, if business activity recovers.

Capital Expenditures

In its latest report on plant and equipment expenditures, the Department of Commerce noted that U.S. business, responding to the pressures of reduced profitability and liquidity, reduced plans to increase capital expenditures in 1982 from 7.3% to only 2.2%, which translates to a 1981-1982 decline of 2.4%, when adjusted for changes in prices. Expenditures by manufacturing companies in terms of current dollars is expected to show a 0.4% gain; after price adjustment the expenditures represent a decline of 3.5%.

The new data show that paper and allied products companies have reduced their expenditure plans in 1982 from the previously published level. The report shows these companies expect to spend \$5.91 billion on new plant and equipment in 1982, a 12% reduction from the \$6.72 billion spent in 1981 and also a 12% reduction from the 1982 projection made three months earlier. In real terms, the 1981-1982 decline amounts to an estimated 14%. The Department of Commerce also reported that the carry-over of paper capital projects at the end of the first quarter of 1982 amounted to \$6.6 billion, nearly 20% above the \$6.03 billion carry-over at the end of the first quarter 1981, indicating possible delay of existing plans rather than outright cancellation.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 7

Paper and Paperboard: Impact of Recession

The recessionary forces in the U.S. continued their impact on the paper industry in the second quarter of 1982. Production declined to a seasonally adjusted rate of 57.8 million tons per year, 5.3% below the 61.0 million tons per year rate achieved in the first quarter of the year and 8.8% below the cyclical high reached in the third quarter of 1981. The negative impact continued as the quarter progressed, with the May/June 1982 annual rate averaging 57.2 million tons per year.

New domestic supply (production plus imports less exports) which had maintained a fairly firm relationship with real GNP during 1981 and the first quarter of 1982 declined faster than GNP during the second quarter, according to preliminary figures.

Close to 4,000 tons of paper and paperboard were supplied for each billion dollars of real GNP through the first quarter of 1982. New supply per billion dollars of real GNP fell to 41,440 tons in the second quarter, however, the lowest level since the 1975 recession.

Inventory reductions continued to dominate the national economy in the second quarter and this affected the demand for paper and paperboard. The sharp inventory contraction of the first quarter moderated in the second, but still confirmed the need of business to convert inventories into cash.

Consumer spending, particularly for non-durable goods, advanced during the second quarter but this was the only encouraging news.

The GNP figures reflect the annual revisions by the Department of Commerce and are now about 0.5% lower than the previously reported data. The preliminary data for the second quarter show a modest increase in real GNP, at an annual rate of 1.7%.

Goods output, as measured by manufacturing production, was more in line with that of paper and paperboard production. Manufacturing production peaked

Continued on Page 2

in the third quarter of 1981, fell sharply in the fourth quarter and continued to decline in the first quarter of 1982. During the second quarter manufacturing production declined at a more moderate rate and was at an index level of 138.1 (1967=100), 1.2% (4.8% per year) below the first quarter 1982 level and 9.4% below the second quarter 1981 level.

The table on the bottom of page 10 presents the revised GNP data and the ratios of new supply to real GNP for the years 1976-1981, together with quarterly data for 1981 and the first two quarters of 1982. The table also shows data on manufacturing production for these same periods, together with the ratio of new supply to the index of total manufacturing production.

Preliminary data for July reveal that many paper and paperboard producers are extending their normal seasonal shutdowns.

Despite the tax cuts, consumer spending in July remained sluggish as interest rates continued to discourage installment buying. A lowering of interest rates which began in late July will contribute to a faster pace of consumer spending later in the year.

Production By Grade

The impact of the recession was fairly well distributed throughout the grade structure. For example, total paper production in the second quarter of 1982, at 29.1 million tons per year, was 5.7% below its first quarter level, and 6.2% below the 1981 high of 31.0 million tons. Paperboard production, at 28.7 million tons per year was 4.8% below its first quarter level, but 8.2% below its 1981 total.

Paper: Among the paper grades, newsprint production continued to exceed its year-ago level, with the six-month total 2% ahead of the year-ago rate. However, newsprint inventories at paper mills continue to be fairly high and some weakness is becoming evident in newsprint output.

Printing and writing paper shipments were down 3.4% from year-ago levels during the first six months of 1982. However, both orders and shipments for the important uncoated free sheet papers, which had shown a relatively good recovery in the early months of the year from their 1981 year-end low, moved again in a general downtrend during the second quarter, with orders running just a little below shipments. The backlog of unfilled orders was 33% below its year-ago level as of the end of June 1982. Groundwood paper shipments were 6% below their year-ago total in the first half of 1982. However, new orders were above production during most of the second quarter so that the backlog of unfilled orders is in a fairly strong uptrend. In fact, the level reached at the end of June was 10.6% above its year-ago level. Coated papers are showing the strongest trend among the printing paper grades, with the six-month 1982 shipments total within 0.5% of its year-ago level. While the unfilled order backlog was down by 16% from its June 1981 level, the trend of unfilled orders in the last two months has been flat, with orders and shipments in balance during the month of June.

Imports and Exports: Bureau of the Census; data includes products

The packaging and industrial grades, by way of contrast, were down sharply, with the six-month total 9% below the year-ago levels.

Technical Note: The data on printing and writing papers presented in the table on page 3 and in the Industry Fact Sheet have been revised by the Printing-Writing Paper Division as a result of its annual review. In some instances, such as uncoated free sheet papers, the revisions go back to 1978, but for the most part, they involve only 1980 and 1981. Changes are relatively small: in 1981, for example, total printing/writing paper production is now reported at 15,736,000 tons; the previous figure was 15,681,000 tons. The 1980 revision is also of a similar small magnitude. The tissue paper data for 1980 and 1981 have also been revised in line with the latest information available from the Tissue Division; again, the changes are quite small. Tables showing monthly data from 1978 through June 1982 are available from the Economics Department on request.

Paperboard: For the entire first half, paperboard production was down by 7.8%, compared to the 3.5% decline in total paper production for the same period. Production of paperboard and of paper packaging products tend to move in line with industrial production in that most of their markets are in the industrial sector of the economy. Printing and writing paper production, on the other hand, tends to be more closely related to total economic activity as measured by the Gross National Product; these papers find major markets in the service sector of the economy, which tends to be more resistant to business cycles.

Declines in paperboard production were fairly well distributed throughout the structure. Relative to year-ago levels, the best performance was turned in by solid bleached paperboard, which showed a 6.5% decline in production from the first half of 1981 to the first half of 1982. The largest decline was in semichemical paperboard, which fell by 9%. In terms of markets, the production of containerboard for domestic use declined 8.3%; production of boxboard for domestic use was down 8.5%. These declines compare to the 8.5% cut recorded in manufacturing production from the first half of 1981 to the first half of 1982. Over that same period, real GNP declined by 2.1%.

Production of paperboard for export held up fairly well, with the total down by 4.2% in the first half of the year; production of kraft linerboard for export showed a 4.3% decline. The monthly levels of linerboard exports in the February-June period fluctuated in the 152-181,000 tons per month range.

Sales and Earnings

The current recession has had a major impact on paper industry sales and earnings. Net sales of 25 paper companies, based on press reports, totalled \$8.59 billion in the second quarter of 1982, 8.4% below sales in the second quarter of 1981. Second quarter 1982 profits of these companies, at \$284 million, were down 45.5% from their year-ago level. The margin on sales dropped from 5.6% in the 1981 quarter to 3.3% in 1982.

For the entire first half of 1982 sales of these companies amounted to \$16.9 billion, 7.3% below the year-earlier total. After-tax profits were \$543 million, down 45%, so that the margin on sales, at 3.2%, held close to the 3.3% noted for the second quarter of the year. In the corresponding period of 1981 these companies had a 5.4% margin on \$18.2 billion in sales.

Based on paper industry companies as defined in the Federal Trade Commission reports, these companies accounted for over half of the net sales of all paper companies.

The decline in net sales as reflected in these data probably overstates the drop in U.S. industry sales by a small amount. If the 1981 sales volume of one major company is restated to conform to its 1982 configuration, the quarter-to-quarter decline in sales would be 5.9% and the decline for the first half of 1982 from the first half of 1981, 4.6%. If the earnings were similarly restated the decline would also be a little smaller.

While the comparisons with year-ago data show fairly sizeable declines, the trends from the first to second quarters of 1982 are a little more encouraging. In spite of the decline in the rate of production, net sales of these companies rose by 3.1% from the first to second quarters of the year; after-tax profits by 9.8%.

Capital Appropriations

The Conference Board reported that newly approved capital appropriations in the first quarter of 1982 by those paper companies included in the 1,000 largest companies in the U.S. amounted to \$2.2 billion, 67% above the \$1.3 billion appropriations reported in the fourth quarter of 1981.

Appropriations in both the fourth quarter of 1981 and the first quarter of 1982 were significantly above the rate of capital expenditures by these same companies, so that the backlog of unspent appropriations rose from \$4.3 billion as of the end of the third quarter of 1981 to \$6.1 billion as of the end of the first quarter of 1982. While not fully comparable with earlier data, the Board did point out that appropriations by these companies amounted to \$2.1 billion in 1978, rose to \$3.9 billion by 1980, and then eased to \$3.7 billion in 1981. In these terms, the appropriations for the first quarter of 1982 represent a sizeable total.

The industry's planned expenditures for plant and equipment in 1982, as reported by the Department of Commerce, are expected to be 12.1% below the 1981 total in current dollar terms, and about 16% behind when adjusted for increases in prices of plant and equipment.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 8

August, 1982

Paper and Paperboard Production: Trend Bottoming Out?

Preliminary data indicate that the production of paper and paperboard in July 1982 totalled 4.5 million tons, 8.7% below the July 1981 total, bringing the seven-month 1982 total 5.8% below the comparable 1981 level. Data for the first two weeks of the month indicate that the August 1982 production total will move above the 5 million ton level, but will be about 7% below the August 1981 total. Despite the year-to-year declines, the trend of production in the May-August 1982 period has been fairly flat. On the basis of the two-month moving average of the seasonally adjusted data (the two-month average is used to eliminate the effects of random fluctuations) the rate of production in each of those months was close to 57.6 million tons per year.

The flat trend was evident in both paper and paperboard production. The trend rate of paper production ranged in the 29.0-29.5 million tons per year range during that period, while the rate of paperboard production stayed in the 27.9-28.9 million tons per year range.

The table below shows the two-month average of seasonally adjusted figures, centered in the second month; e.g., the figure shown for January 1982 is the December 1981-January 1982 average.

1982 Paper and Paperboard Production Trend
(000 tons per month)

	Paper	Paper-board	Total		Paper	Paper-board	Total
January	2,518	2,396	4,914	May	2,443	2,410	4,853
February	2,575	2,508	5,083	June	2,413	2,384	4,797
March	2,580	2,547	5,127	July	2,462	2,325	4,787
April	2,537	2,453	4,990	August(E)	2,450	2,362	4,812

E - August component based on two weeks data.

Continued on Page 2

Production by Grade - Paper

Although the rate of total paper production held fairly steady in recent months, the individual grades followed somewhat different trends. The rate of newsprint production, for example, weakened a bit in July, although the seven-month total just about matched its year-ago level. The disappearance of the threat of work stoppages in the Canadian newsprint mills is permitting newspaper publishers to reduce their rather heavy inventories. Their inventories at the end of June 1982 amounted to 61 days of supply, compared to a more unusual 47 days of supply in June 1980 and 54 days of supply in June 1981.

The rate of printing/writing paper production moved downward in July, largely as a result of weakness in the uncoated free sheet grades; the seasonally adjusted rates of uncoated groundwood papers and of coated papers held up rather well. Tissue paper production has followed a flat trend since April 1982, while some strength has been evident in production of the packaging and industrial grades.

Production by Grade - Paperboard

Paper production tends to move in line with total economic activity since it has the support of the relatively stable service industries as a market for its products; paperboard production, however, largely used in packaging, tends to move more with manufacturing production. Total business activity in the first half of 1982, as measured by the real gross national product, was 2.1% below its year-earlier level; paper production showed a 3.4% decline in the first seven months of 1982. Paperboard production was down by 8.4% in the first seven months of 1982, compared with an 8.8% decline in manufacturing production.

The close relationship between paperboard production and its markets is clearly shown by the containerboard data. Production of containerboard for domestic use in the first seven months of 1982 was 9.3% below its year-ago level. In that same period, shipments of fibre boxes, as reported by the Fibre Box Association, were down 6.8%. Part of the reason for the somewhat steeper decline in containerboard production was the inventory pattern: inventories of containerboard at box plants and mills (about 86% at box plants, 14% at mills) rose by 387,000 tons in the first seven months of 1981, but declined by 122,000 tons in the first seven months of 1982.

Exports account for an important part of total containerboard demand. Production of unbleached kraft linerboard for export was

^{1/} Excludes extraordinary gains or losses, including those resulting from sale of mills, plant and property, write-downs of closed units, etc.

Sales and Earnings

Sales of 33 paper and allied products companies in the second quarter of 1982 totaled \$10 billion, 9.1% below the second quarter 1981 total. These companies earned \$307 million for a sales margin of 3.1%. The 1982 profits total was 49% below its year-ago level.

For the entire first half, these companies showed a 7.9% decline in sales and a 49.4% decline in profits. However, as noted last month on the basis of a somewhat smaller sample, paper companies showed an increase in both sales and earnings from the first to the second quarter of the year.

The data for these companies, together with data for 13 non-paper companies with major operations in the paper industry, are shown in the table on the lower half of page 10. Many of these non-paper companies have pulp and paper operations large enough to rank with the top 10 paper and allied products companies.

Technical Note:

The Department of Commerce reported that it will now compile its paper industry wholesaler's sales data only at the level of total paper and paper products, and will no longer calculate sales and inventories of the paper sectors separately. The Industry Data Sheet had been showing sales and inventories for the total group and for the paper sector separately.

This Industry Data Sheet will now substitute a new series: shipments of fibre boxes (corrugated shipping containers) as reported by the Fibre Box Association.

Statistics of Paper

The 1982 issue of the Statistics of Paper, Paperboard and Wood Pulp will be mailed to member companies within the coming month. Non-members may order copies from the Economics Department at \$140 per copy.

Sales and Earnings

Sales of 33 paper and allied products companies in the second quarter of 1982 totaled \$10 billion, 9.1% below the second quarter 1981 total. These companies earned \$307 million for a sales margin of 3.1%. The 1982 profits total was 49% below its year-ago level.

For the entire first half, these companies showed a 7.9% decline in sales and a 49.4% decline in profits. However, as noted last month on the basis of a somewhat smaller sample, paper companies showed an increase in both sales and earnings from the first to the second quarter of the year.

The data for these companies, together with data for 13 non-paper companies with major operations in the paper industry, are shown in the table on the lower half of page 10. Many of these non-paper companies have pulp and paper operations large enough to rank with the top 10 paper and allied products companies.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 9

September, 1982

Paper and Paperboard Production Turning Upward

Paper and paperboard production rose modestly in the last two weeks of August and, following a seasonal drop for Labor Day in the first week of September, moved further upward in the second week. The seasonally adjusted trend of production in August (based on the two month July/August average, to eliminate random fluctuations) was 58.8 million tons a year. This compared to the July trend position of 57.8 million tons per year and the June low for the year of 57.5 million tons per year. At its 1982 peak in February-March, production was at the rate of 61.6 million tons per year. If paper and board production continues at the rate reached in the second week of September, the September production trend would move above 60 million tons per year.

The modest uptrend was experienced by virtually all the separate paper grades. Printing and writing paper production, for example, totalled 1.33 million tons in August, second only to the March total. On a seasonally adjusted basis, the August trend position of printing/writing paper shipments was the highest for the year. Total packaging and industrial grades showed a fairly strong growth in August, with the August trend position at a five month high. Production of "other" packaging and industrial converting papers, in particular, at a seasonally adjusted rate of 1.8 million tons per year in August, marked a high for the year.

The rate of newsprint production eased slightly in August, bringing the eight month total 1.6% below the corresponding year-ago level. Newspaper publishers have been reducing their stocks of newsprint since March. The latest available data, as of the end of July, show their newsprint stocks at 1.67 million tons, about 10% below the peak level reached at the end of March. Nevertheless, the July level was equivalent to a relatively high 55 days of supply.

Continued on Page 2

Among the paperboard grades, the production of unbleached kraft linerboard in August, at 1.2 million tons, was second only to the March level. Nevertheless, the eight month total was still 8.7% below the comparable 1981 level. Production was supported to some extent by exports; in the first eight months of 1982 production for export was at the rate of 1.9 million tons per year, 4.8% below the year-ago total. Semichemical paperboard production for export was about 8% above its year-ago level, but the rate was only 185,000 tons per year. Solid bleached board production for export, was down nearly 5%, so that the total paperboard production for export was 4% below its year-earlier total. However, the annual rate - 2.67 million tons per year - compared favorably to the 2.62 million tons produced for export in all of 1981.

The August strength in kraft linerboard production also reflected an increase in shipments of fibre boxes. The Fibre Box Association reported shipments in August at 20.4 billion square feet, the highest level since March, the second highest for the year and only 2% below the August 1981 level. Inventories of containerboard at fibre box plants fell 55,000 tons in August, bringing the total to the lowest level since March and the weeks of supply to 6.4 at the August rate of consumption. Containerboard mills had about another equivalent week of supply in inventory.

Production of the boxboard grades showed similar strength, with the August 1982 total the second highest month for the year; the peak this year was in March.

Total paperboard production for the first eight months of 1982 was 8% below the corresponding year-ago total, with containerboard grades produced for domestic use down 9.1% and boxboard grades down 7.8%.

Capital Expenditures

The Department of Commerce reported that expenditures for plant and equipment by paper and allied products companies were at a rate of \$6.04 billion per year in the first half of 1982, about 10% below the corresponding 1981 level. Commerce revised the second quarter level upward by about 5%, reflecting additional information received from their survey companies. Commerce also reported that paper and allied products companies expect to increase their expenditures for new plant and equipment in the third and fourth quarters of the year to a rate of nearly \$6.5 billion per year. This would bring the 1982 total to \$6.28 billion, about 6.5% below the \$6.72 billion spent in 1981.

Continued from Page 2

The increase in capital expenditures suggested by the Department of Commerce is consistent with data on capital appropriations reported by the Conference Board. The Conference Board reported that newly approved appropriations in the first quarter of 1982 by those paper and allied products companies included in the 1,000 largest U.S. corporations amounted to \$2.1 billion, considerably higher than the \$1.22 billion per quarter level of newly approved appropriations reported in the last half of 1981. The closing backlog of unspent appropriations at the end of the first quarter amounted to \$6.4 billion, which was equivalent to about 1 3/4 years of capital expenditures at the year-end 1981 rate.

The Board further reported, however, that newly approved appropriations declined to \$582 million in the second quarter of the year while expenditures rose to nearly \$1 billion. Even with this decline in the backlog during the quarter, the closing backlog amounted to a shade less than \$6 billion, which is historically a high level for this series. It suggests that expenditures could hold near the current level for at least the remainder of 1982.

Inputs

Wood pulp production in the first seven months of 1982, excluding the defibrated and exploded grades, was at a rate of 50 million tons

Continued on Page 11

per year, 5% below the corresponding year-ago total. Imports, at 3.5 million tons per year, were down 17%, while exports, also at 3.5 million tons per year, were down less than 6%. As a result, the new supply rate was equal to the production rate and 6% below its year-ago level.

Production of dissolving pulps, largely used outside the paper industry for such products as rayon, acetate, cellophane and food additives, was at the rate of 1.1 million tons per year in the first seven months of 1982, 17% below its year-ago total. Exports, which normally account for about half the production total, were at 620,000 tons per year in this period, 21% below the corresponding 1981 total. The weakness in dissolving pulp production and demand may be seen by the comparison with the 1980 figures: in 1980, production of dissolving pulp amounted to 1.5 million tons, new supply, 1.0 million tons; new supply in the first seven months of 1982 was less than 700,000 tons per year.

The paper grade market pulp data reported by API's Pulp Division show a somewhat stronger trend than that of total wood pulp. API reports that paper grade chemical market pulp shipments in the first seven months of 1982 was at an annual rate of 4.7 million short tons per year, 4% below the year-ago level. Imports of these pulps were down 16%, but exports were off by only 2%. Preliminary data on chemical paper grade market pulp exports in August show a 12% drop from the August 1981 total, bringing the eight month 1982 rate 3% below its year-ago level. That same report shows that demand for U.S. chemical paper grade market pulp was supported by year-to-year increases in exports to Western Europe and Japan. At the same time, shipments to the U.S. market in the first eight months of 1982 were off by only 2%, while shipments to "other" markets declined by 13%.

The Pulp, Materials and Technology Group of API reported that fossil fuels and purchased energy used per ton of output at primary producers in the second quarter of 1982 (after adjustment for the net effect of such operating changes as environmental energy use, fuel mix, and capacity utilization) was 37.2% below the corresponding 1972 quarter. For the entire first half, the adjusted decline since 1972 amounted to 33.9%.

In another report, this Group noted that fossil fuel and purchased energy accounted for only 49.2% of the pulp, paper and paper-board industry's total energy needs in the first half of 1982, while 50.8% of the total came from self-generated and residue sources.

The Group also published data on specific fuels used by the industry in that period. The report noted that spent liquors, the largest single source of fuel, accounted for 37.2% of the total use in the first six months of this year, compared to 33.4% in 1972. The report also showed that hogged fuel accounted for 7.5% of the industry's total use; in the comparable 1972 period, this type of fuel accounted for only 2.0% of the total use.

There were also some important changes in the use of purchased fuels. Residual fuel oil, for example, which accounted for 20.9% of total energy used by the industry in the first six months of 1972, dropped to 13.0% in the first six months of 1981 and 12.3% in the first six months of 1982. Coal, on the other hand, rose from 10.8% in the 1972 period to 11.2% in the first six months of 1981 and 12.0% in the first six months of 1982. Finally, natural gas dropped from 21.1% of the total in the first half of 1972 to 18.5% in the first half of 1981 and 17.2% in the first half of 1982.

The current recession has had a major impact on employment in the paper industry. Preliminary data for August 1982 show total employment at paper and allied products establishments at 660,000 persons, 5% below its year-ago total. For 1981 as a whole, employment averaged 688,000 while in 1980 it was 693,000. A similar pattern was evident at pulp, paper and board mills, where the July employment total was 257,600 persons, 5.6% below the year-ago level. In 1980, by way of contrast, employment averaged 268,400.

The rate of increase in average hourly earnings as reported by the Bureau of Labor Statistics has also slowed in 1982. For the first seven months of the year, average hourly earnings at pulp and paper mills was \$10.64, 8.6% ahead of the corresponding year-ago level. Earnings at paperboard mills averaged \$10.85 per hour in the first seven months of 1982, 8.1% above their year-ago level. In the five years 1976-1981, average hourly earnings rose by 10.5% per year at paper and pulp mills and 9.8% per year at paperboard mills.
